Experience

BAE Systems

San Diego, CA

Senior Principal Software Engineer

2016 - Today

EMBM – *Software Lead*; RFT PRO – *Software Lead*; SAINT – *Developer*

2025 - Today

- Leading multiple programs simultaneously by creating tasking for team.
- Integrating created software into various customer-facing business development opportunities.
- Developed test harness and docker images to benchmark CPU bottlenecks of fusion software. Able to remove ~8% of CPU usage by fixing low-hanging fruit issues.

CEREUS – *Software Lead*

2023 – 2024

- Responsible for coordinating with BAE-internal teams to onboard various high TRL algorithms as well as coordinating with external companies such as the lab where our software needed integrated to ensure the collection of to ensure a successful demonstration of our prototype's capabilities.
- Responsible for mentorship of two relatively junior engineers while also individually completing several complex technical tasks required for the integration in the customer-required lab.

CBC2 – *Deputy Software Lead*

2022 – 2023

- Co-Creating sprint plans, helping engineers with tasking, following up with engineers to ensure any technical debt being created will be addressed in future sprints, leading scrum and developing software as needed

A-TEAM, OMFV – *Software Lead*

2020 – 2022

- Coordinated with 3 teams who were in remote BAE Systems facilities as well as external companies while also taking customer feedback to help drive integration efforts of all the teams.
- Discovered frequent API compatibility issues between the various teams which we would then work to resolve alongside the various external teams.

Various Early Career Programs – DARPA CODE, Internal Research and Development

2016 – 2020

- Maintained and added features to legacy airborne vehicle pathfinding algorithm.
- Successfully delivered algorithm for flight test's install on drones and simulation environment.

Skills & Interests

Personal Project Portfolio – Website: <https://asarkisian.com/projects.html> - GitLab: <https://gitlab.com/ASark>

- Most Recently - Wrote a physics simulator that lets both the player and AIs simultaneously calculate + cache trajectories of objects that can be thrown in real-time while maintaining 144 frames per second.
- Developing software architecture knowledge by maintaining a ~4,500-commit codebase over ~10 years.
- Mentoring non-software engineer on various software development techniques and design patterns.

Programming Languages:

- Expert: C#, C++
- Proficient: TypeScript, JavaScript, Java, Python, bash
- Novice: C
- Familiar: HTML/CSS, MySQL, NoSQL, PowerShell

Software Development Tools

- Expert: Unity3D, Docker
- Proficient: GitLab, GitHub, Jira, Visual Studio, Visual Studio Code, CMake, JUnit, RTI DDS, React, Redux, Helm Charts, BitBucket, NUnit, Google Test, Google Protobuf, Kafka, ActiveMQ, Kubernetes, Magic Draw, Docker Compose, Podman, Podman Compose, grep
- Novice: Gradle, Maven

Education

Indiana University – Master's Degree (2016), Bachelors' Degree (2015) - Computer Science

Bloomington, Indiana
